July, 1996

Dear Friends:

This 1996 edition of the Colorado Agricultural Statistics Bulletin represents the ongoing and cooperative relationship of the Colorado Department of Agriculture and the Colorado Agricultural Statistics Service. In this report, you will find helpful and reliable statistics about Colorado's \$4.3 billion agricultural industry.

This bulletin also contains the **Annual Report of the Colorado Department of Agriculture**. In this report you can learn the full array of responsibilities and activities of the Colorado Department of Agriculture as well as information about the services the department offers. If you have questions about the department's programs, please feel free to call.

Agriculture is a dynamic industry. Market prices for crops and livestock can fluctuate wildly, weather and pests can change cropping patterns and livestock management, and new federal farm policies create unprecedented options for America's farmers. In this environment, producers, suppliers, processors, and other associated businesses need the most reliable and current agricultural data for their economic survival. This bulletin can be a source of valuable information.

Special thanks are extended to the Colorado Potato Administrative Committee for their financial contribution in making this bulletin as attractive as it is informative.

Sincerely,

Thomas A. Kourlis Commissioner

TABLE OF CONTENTS

Colorado's rank in agriculture	2 3
FIELD CROPS:	
Principal crops; Historic acreage, production, and value	4
1995 Crop review	
1995 Colorado weather summary in brief	16
District and county estimates by crop:	
Winter wheat	18
Spring wheat	22
Corn for grain	26
Corn for silage	30
Barley	32
Oats	36
Sorghum for grain	40
Sunflowers	44
Sugar beets	47
Dry beans	48
Potatoes; also disposition and stocks	53
Hay crops	56
Grain and hay stocks	68
Barley and wheat varieties	71

^{1/} Includes wild, millet, sudan, clover & timothy, grain and other miscellaneous tame hays.

1995 CROP REVIEW

The combined value of production for small grain, hay, and late season row crops (excluding sugar beets) produced in 1995 totaled \$1,450.2 million compared with the comparable value of \$1,221.1 million for the 1994 crops. Colorado producers had a larger output in 1995 than they did in 1994 for winter wheat, corn silage, barley, oats, rye, and all sunflowers. Production from all other major crops was lower than the previous year.

The 105.3 million bushels of all wheat produced in 1995 was valued at \$483.4 million, making it the most important crop in the state in terms of value. The value increased by 75 percent over 1994. Winter wheat production, at 102.6 million bushels on 2.7 million acres harvested, was 34 percent higher than the previous year. This was the largest winter wheat production and average yield since 1985 when 134.6 million bushels were produced with an average yield of 39.0 bushels per acre. The 1995 average of 38.0 bushels per acre was 8 bushels per acre above the 1994 average. Spring wheat production decreased 18 percent from 1994 to 2.66 million bushels. There was a reduction of 4,000 harvested acres (10 percent) and the average yield declined 7 bushels per acre from last year.

Corn for grain was the second most important crop in the state in terms of the value of production. Corn for grain contributed \$359.4 million or 24.9 percent of the total value of all field crops. The 1995 crop of 92.1 million bushels was 31 percent less than the 133.5 million bushels produced in 1994 as a result of a much lower yield per acre and 7 percent, 60,000 acres, less harvested acres. This was the lowest production figure since 1983 and the smallest yield per acre since 1978. With below average temperatures, crop progress lagged behind average and freezing temperatures in late September cut the growing season short in many corn growing areas of the state. The average yield of 111 bushels per acre was 39 bushels less than the 1994 average. Corn silage production was up 3 percent from 1994 to 2.1 million tons with an increase in acreage harvested. The average yield of 20.0 tons per acre declined by 1.0 ton per acre from last year.

All hay dropped from the leading crop to the state's third leading crop in terms of the value of production by contributing \$350.8 million. The 1995 crop of 3.98 million tons was 2 percent below the 4.06 million tons produced in 1994. Lower alfalfa yields offset the small increase in acres harvested resulting in lower production. The harvested acreage of all other hay was up 4 percent, and with higher yields, production increased 17 percent. All hay prices averaged \$2.50 per ton lower than 1994.

The value of production of all potatoes totaled \$149.9 million in 1995, up 40 percent from the previous year. Higher prices more than offset the 8 percent decrease in all potato production. Fall potato production was down 8 percent to 23.81 million cwt as growers harvested more acres but the yield declined 40 cwt per acre. At 310 cwt per acre, this was the lowest yield since 1983. Summer potato production, at 2.70 million cwt, was down 12 percent. Yields for summer potatoes decreased 30 cwt from last year to 300 cwt per acre.

Dry bean production decreased 19 percent from a year earlier to 2.56 million cwt and prices declined 2 percent resulting in a 20 percent decrease in total value to \$41.70 million in 1995. While no value has yet been determined for the 1995 crop of sugar beets, the 715 thousand tons of beets produced was down 24 percent from a year earlier. This was the lowest production since 1985 when only 2,500 acres were harvested. At 17.4 tons per acre, the average yield was the lowest since 1983.

Barley production increase 34 percent from 1994 to 10.0 million bushels in 1995 with an increase in harvested acres and yield. The 1995 crop value of \$30.00 million was up from \$19.72 million for the 1994 crop. Sorghum for grain production decreased 35 percent from 1994 to 4.62 million bushels. Harvested acres declined slightly and with yields down dramatically higher prices pulled total value up to \$14.88 million, down 3 percent from 1994. Oats production for 1995 was 42 percent above 1994 and the increase in price pushed the total value to \$3.99 million, 54 percent higher than last year.

The 1995 output of sunflowers was valued at \$12.61 million compared with \$10.86 million for the 1994 crop. Sunflower production increased 3 percent from 1994 to 98.8 million pounds in 1995. Of this total production, 50.8 million pounds was from oil varieties and 48.0 million pounds was from non-oil varieties. Growers harvested 62,000 acres of oil varieties, a decrease of 7,000 acres from 1994. The acreage of non-oil varieties increased 22,000 acres to 48,000 acres. This was the largest non-oil harvested acreage since the estimate started in 1991. Per acre yields declined for each type.

Winter wheat seedings for the 1996 crop, at 3.0 million acres, were up 3 percent from the 2.9 million acres seeded for the 1995 crop. Soil moisture conditions were poor in the southwest and the southeast and the crop had difficulty germinating. Continued dry conditions into May of 1996 has resulted in the highest number of winter wheat acres abandoned since 1983, with most of the losses occurring in the southeastern counties.

1995 COLORADO WEATHER SUMMARY IN BRIEF

(Source: Colorado Climate Center, Colorado State University)

January - A series of Pacific storm systems weakened as they reached Colorado. Modest doses of snow added favorably to the mountain snowpack, but a large area just east of the Continental Divide remained very dry. An unusual January rainstorm soaked parts of eastern Colorado. Overall, temperatures averaged much above average statewide while precipitation totals ranged from much below to much above average.

February - For most of the month, weather was extremely mild except for a potent onslaught of snow and wind February 8-14 which buried the central mountains under 3 to 7 feet of snow. The week of cold weather associated with the storm kept February from being the warmest on record as temperatures during the rest of the month averaged well above average. Precipitation totals ended up above average for most mountain areas but drier than average over much of southern Colorado.

March - Heavy mountain snows early, some sub-zero temperatures, howling duststorms and record breaking warm temperatures, a nasty blizzard on the Plains, and feet of foothills snow late in the month were all part of the usual March weather picture. Overall, the month ended warmer than average over most of the state and wetter than average except across the northern part of the state.

April - The month's weather was divided nearly into two opposite halves. The first half of the month was predominantly sunny, dry, warm and occasionally windy except for a brief but potent spring blizzard April 9-10. The last half of the month brought persistent cloudy, cold weather with frequent rain and snow. Overall, the month ended up cooler than average statewide with most areas receiving more precipitation than normal.

May - Last month's ending weather pattern continued into May with widespread clouds, frequent fog, rain almost every day, mountain snows and much below average temperatures. It will be remembered as one of the wettest on record for many parts of the state. Temperatures averaged well below average for most of the month, making it one of the coldest May's this century.

June - For the third month in a row, conditions were cloudier, cooler and wetter than usual. Strong thunderstorms with local downpours, some damaging hail and a few tornadoes were also numerous. A few hot, dry summer days were accompanied by rapidly melting snowpack causing many rivers and streams to run near flood stage.

July - The seemingly endless cold, damp spring finally loosened its grip, but not before snow and cold rain chilled many Fourth of July activities. There were two separate week-long statewide heat waves during the month. Thunderstorms were common in early and mid-July, but were sparse later in the month. Overall, July was cooler than average statewide but drier than average except in west central and extreme eastern areas.

August - Most areas of the state ended up drier than average as only infrequent storms occurred during August. Afternoon thunderstorms were a daily routine, mostly in or near the mountains. Temperatures were above average nearly every day of the month and climbed above 100 degrees on several occasions west of the mountains. In eastern areas, temperatures reached 90 degrees or more on most days of the month.

September - The month's weather included intense summer heat, lively thunderstorms, cold drenching rains and (for parts of the state) heavy snow. An early snowstorm on September 20-21 and a hard killing frost on the 22nd brought an abrupt end to the growing season in many areas. After a slow start from the cool, wet spring many crops had not reached full maturity resulting in poor yields and quality.

October - Precipitation totals for the month were much below average statewide except for portions of the Northern and Central Mountains and the northeast corner. Very warm conditions at mid-month nearly compensated for cooler than average weather early and late in the month as most of the state ended up near or slightly below average for the month.

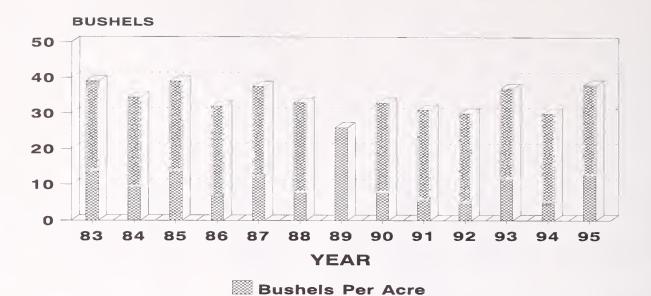

November - Temperatures averaged much above average for most of the month even though more clouds, stronger winds and shortening daylength signaled winter's approach. Snow accumulated nicely in the northern and central mountains, but most of southern Colorado remained very dry. A few cold days at the beginning of the month and on the 10-11th and 26-27th were all that kept November from being one of the warmest on record.

December - Ten weather disturbances affected the state during the month, but none brought any widespread precipitation or cloudiness. Temperatures remained above average for most days. Precipitation was much below average. Areas east of the mountains were especially dry. Significant snowfall was infrequent. A big storm on the 31st closed out the year with heavy snow in the northern and central mountains.

COLORADO POTATOES

"Quality as High as our Mountains" is the slogan associated with the logo developed and used by the Colorado Potato Administrative Committee (CPAC) in the marketing and promotion of Colorado potatoes. Nearly all of Colorado's potatoes are produced in the shadows of the Rocky Mountains. The potato, one of nature's greatest triumphs, is so versitile it lends itself to a wide variety of creative uses that are perfect for serving year around as appetizers, accompaniment dishes and substantial main dishes. Potato production in Colorado is divided into two seasonal groups and a separate data series is prepared for each group. Fall potatoes account for about 90 percent of the production and summer potatoes account for 10 percent.

FALL POTATOES

All of the state's fall potatoes are produced in the San Luis Valley, a high alpine basin in south central Colorado nested between the majestic San Juan and Sangre de Cristo mountains. Legend has it that after the Spanish Conquistador's quest for glory and gold, they settled in Colorado's San Luis Valley because of the healthy, rich soil. Here, the snow-covered peaks of the Rocky Mountains jut up 14,000 feet to surround the highest and largest alpine valley in the world. Local farmers began growing potatoes in the Valley in the late 19th century, making the San Luis Valley one of the oldest potato growing areas in the country. The Valley's fertile soil, pure air, warm summer days and cool nights, combined with modern irrigation methods and expert farming techniques, provides a virtually pest-free growing environment for the fresh-grown potatoes. The excellent growing conditions assures the consumer one of the best and freshest tasting potatoes available all year long.

The two major types of potatoes grown in the San Luis Valley are "russets" and "reds". The russet potato is characterized by their even oval shape, russet brown color, smooth textured skin and few shallow eyes. Russet Nuggets are a smooth-skinned, lighter colored potato excellent for baking, mashing, and frying because of their high solids and low sugar content. Russet Norkotahs are a light skinned russet also excellent for baking, mashing, and frying. The Yukon Gold potato has a yellow skin and yellow flesh with a sweeter flavor. They are excellent for baking, mashing and frying. The round red Sangre potato is best used in soups and stews because slices and chunks hold their shape during cooking. They are also excellent baking potatoes and are ideal for potato salad. Russet potatoes generally account for about 94 percent of the production while reds make up the remaining 6 percent.

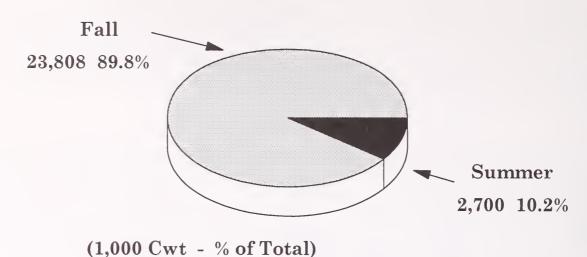

San Luis Valley potato planting begins in late April and continues through May. Harvest begins in late August and is usually completed by mid-October. A major portion of the crop is put into private and commercial storage facilities from which the crop is marketed from harvest through July of the following year. Fall potato production normally accounts for about 90 percent of the state's total potato production. The potatoes are marketed through a marketing order administered by the Colorado Potato Administrative Committee (CPAC). The CPAC is funded by an assessment on each hundredweight of potatoes sold. A closely monitored program of state and federal inspection is designed to maintain a constant supply of high quality potatoes to consumers throughout the United States. Most of the SLV potatoes are sold for fresh market use, some of the crop sold for seed, a portion of the crop that does not meet size and grade standards for fresh market use are sold to a local processor for making starch and some have been sold to processors in the Northwest United States for making frozen and/or dry potato products. Through an aggressive program of market development, education, and research, the SLV potato growers have produced a new record high crop of potatoes every year except 1988 and 1992 during the 1981-94 period. The 1995 crop was the third largest.

SUMMER POTATOES

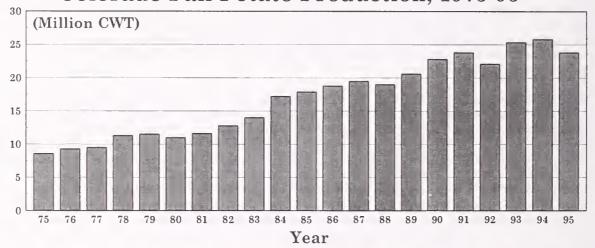

The summer seasonal group of potatoes are produced throughout the rest of the state with most of the output coming from the South Platte Valley overlooked by Long's Peak in Rocky Mountain National Park. In the last several years, Yuma County, in the far northeastern area of the state, has been established as the newest potato producing area of the state. Potatoes were first grown in the Cache La Poudre Valley of northern Colorado in the late 1870's. While generally grown for home consumption, potatoes began making their debut in stores in 1871. Since then, the growth of the potato industry in both the northern and eastern sections of Colorado has made this area a major contributor in the fresh and processed potato markets. Potatoes grown for processing must be low in sugar content and properly stored to ensure that the potatoes remain white throughout the cooking process.

Summer potatoes are planted from mid-April through May and are harvested from mid-July through September. With Yuma County's production, more of the crop is being sold for fresh market use but a significant portion of the crop is still sold to processors-mostly for making potato chips. Most of the fresh market potatoes are russet varieties and the processing potatoes are the larger white potato varieties that are best utilized in making chips. Summer potatoes are also marketed through a federal-state marketing order administered by the CPAC, Greeley office. Summer potato growers also pay an assessment on each hundredweight sold. There is mandatory inspection for table stock potatoes. Processing potatoes are assessed but are marketed through an exemption certificate which does not require inspection.

Colorado Fruit Crops - 1995 Value of Production & % of Total

(Value in \$1,000)

FRUIT CROPS - 1995

Frost and hail played havoc on the 1995 fruit crop as Colorado growers had the lowest production since 1990 for each fruit except peaches, which had the lowest since 1991. Total production of the state's four major fruit crops in 1995 was 79.0 million pounds, down 31 percent from the 114.9 million pounds produced in 1994. The total value of the utilized production from the 1995 crops was \$18.1 million, down 10 percent from \$20.2 million a year earlier. However, a higher value per unit was obtained for each fruit.

Apple growers suffered the worst damage as the 55.0 million pounds produced in 1995 was 35 percent below the 1994 crop of 85.0 million pounds. The average price received for all grades was 16.5 cents per pound compared with 15.7 cents per pound in 1994. The total value of the 1995 crop, at \$8.8 million, was 32 percent lower than the \$13.0 million received for the 1994 crop. Apples represented 48 percent of the total value from the four fruit crops.

Peach production for 1995, at 17.0 million pounds, was down 15 percent from the previous year and marked the first time in four years that producers had their crop reduced by spring freezes. Utilized production was 16.0 million pounds, 11 percent below 1994. The per unit price received for the 1995 crop, at

49.6 cents per pound, was up from 31.9 cents received for the 1994 crop. The total value of the utilized crop in 1995 was \$7.9 million, up 39 percent from \$5.7 million the previous year. The value of the peach production represented 44 percent of the total value from the four fruit crops.

Pear production in 1995 dropped 31 percent from the previous year to 2,900 tons. Growers received an average price of \$357 per ton for the latest crop compared with \$268 per ton for the 1994 output. The total value of the utilized production was \$1.0 million for the 1995 crop, down 9 percent from the \$1.1 realized from the 1994 crop. This drop was only slight because producers received a much higher per unit price than last year. Pears represented 6 percent of the total value received from the four fruit crops.

Tart cherry production totaled 1.2 million pounds in 1995, down 20 percent from 1.5 million pounds produced in 1994. However, the utilized quantity of 1.0 million pounds was only 9 percent lower than the utilized amount from the 1994 crop. In addition, the per unit price received for the 1995 crop, at 41.4 cents per pound, was up from 35.5 cents received for the 1994 crop. The total value of the utilized production, at \$414,000, was 6 percent above the \$390,000 received for the 1994 crop.

^{2/} No significant commercial production or value in 1989 due to frost.

Colorado Vegetable Crops - 1995 Value of Production & % of Total

(Value in \$1,000)

VEGETABLE CROPS - 1995

Vegetable producers in Colorado harvested 10.6 million cwt of fresh market and processing crops during 1995 which had a total value of \$106.9 million, down 7 percent from 1994. Acreage was up from 1994 for all crops except spinach, sweet corn and processing tomatoes. The 10.6 million includes only nine vegetable crops for which acreage and production estimates are prepared. Numerous other vegetable crops are produced in the state but are not surveyed for acreage or production data.

Production of **dry storage onions** in 1995 totaled 6.14 million cwt, up slightly from the previous year. The harvested area increased 2 percent to 17,800 acres while the average yield of 345 cwt per acre was 1 percent below the 1994 average. The quantity of onions expected to be marketed had an estimated value of \$59.0 million compared with \$67.1 million from the 1994 crop, down 12 percent. Onions represented 58 percent of the total production and 55 percent of the total value from the nine crops.

Carrot production was second in terms of value of production and total production. Production increased 45 percent from the previous year, to 1.7 million cwt, wholly the result of increased yields. The total value of the 1995 crop, at \$23.1 million, more than doubled from 1994. Prices increased 35 percent from last year to \$13.50 per cwt. Carrots represented 22 percent of the total value and 16 percent of the total production.

Lettuce was the third highest value vegetable crop produced in the state during 1995, accounting for 6 percent of the total value. Production was up 9 percent from the previous year to 858,000 cwt, attributable to an 18 percent increase in acres harvested and favorable weather. Prices decreased slightly to \$7.65 per cwt. Lettuce represented 8 percent of the total production of the nine crops.

Sweet corn accounted for 5 percent of the total value and 6 percent of the total production. Harvested acreage was down 6 percent. Spinach accounted for just under 5 percent of the total value and 2 percent of the production. Spinach production was down 30 percent to 203,000 cwt as the harvested area decreased by 700 acres.

Cabbage production from 1,900 acres harvested totaled 570,000 cwt in 1995 and had a total value of \$3.5 million. Value was down 44 percent due to a sharp drop in yield. Cucumbers for pickles production in 1995 was 7,410 tons, down 14 percent from 1994. A decrease in yields offset an increase in acreage harvested.

Cantaloupe production totaled 216,000 cwt from 1,800 acres harvested and had a total value of \$2,657,000. Processing tomatoes had a value of \$202,000 in 1995. Cantaloupe yields decreased 33 percent, while tomato yields also decreased by 39 percent, contributing to the decreased production and value.

Total All Plants 3/	75					***		66,059

^{1/} During 1995, there were 133 operations that had sales of \$10,000 or more. The total covered growing area for all 133 operations of 10,730,000 square feet consisted of the following:

^{345,000} square feet of glass; 7,990,000 square feet of fiberglass and other rigid greenhouses;

^{2,210,000} square feet of film plastic (single/multiple) greenhouses; 185,000 square feet of shade and temporary cover.

In addition, plants were produced on 47 acres of open ground.

The data in the table represents production and sales only from operations with sales of \$100,000 or more. The value of sales from all 133 operations with sales of \$10,000 or more totaled \$69,209 million in 1995.

^{2/} For potted plants, price represents a weighted average for plants sold in pots less than 5 inches and in pots 5 inches or more.

^{3/} Value based on equivalent wholesale value of all sales for all crops except potted foliage plants which are based on net value of sales.

COLORADO FARM INCOME

The gross farm income for Colorado's 25,300 farms in operation during 1994 totaled \$4.58 billion, down 4 percent from \$4.78 billion generated from the 25,500 farms in operation during 1993. Production expenses increased 5 percent to \$3.97 billion. Net farm income, at \$607.7 million for 1994, was down 40 percent from \$1,005.9 million the previous year.

Cash receipts from farm marketings were down 3 percent from 1993 to \$4.48 billion in 1994. Receipts from the sale of crops increased 4 percent to \$1.25 billion while receipts from the sale of livestock and livestock products declined 7 percent to \$2.78 billion.

Government payments totaled \$177.1 million in 1994, down 29 percent from \$250.3 million the previous year. Other farm income was up 49 percent to \$269.4 million compared with \$180.5 million in 1993. The value of non cash income, at \$126.0 million during 1994, increased 5 percent from \$120.5 million for 1993. The value of home consumption, at \$7.9 million, was up 16 percent from the previous year while the rental value of operator and hired labor dwellings increased 4 percent from \$113.7 million in 1993 to \$118.1 million in 1994. The value of the inventory adjustment was a negative \$20.8 million compared with a positive \$26.7 million a year earlier. (Continued on next page)

^{1/} Includes operator households.

Farm production expenses totaled \$3.90 billion in 1994 compared with \$3.71 billion a year earlier. The farm origin components of feed, livestock and poultry, and seed purchased totaled \$1.75 billion, down 8 percent from \$1.90 billion the previous year. Those items represented 44 percent of all production expenses. Expenditures for manufactured inputs such as fertilizer, pesticides, and fuel and oil, at \$266.6 million, were up 22 percent from the \$218.9 million spent for those items in 1993. Other expenditures such as those for repair and maintenance and numerous other miscellaneous expenses increased 25 percent to a total of \$982.0 million compared with \$786.6 million the previous year. Interest expenses were up 12 percent from \$219.4 million in 1993 to \$246.2 million in 1994. Contract and hired labor expenses, at \$268.3 million, were 28 percent higher than the \$209.0 million spent a year earlier.

Colorado's farm balance sheet remained relatively stable compared with the previous year. Total farm assets were up 4 percent to \$19.65 billion but total farm debt also increased 4 percent to \$3.06 billion. The largest asset item, real estate, was valued at \$14.92 billion and was 7 percent higher than a year earlier. This item represented 76 percent of the total farm asset value. The value of livestock and poultry, at just under \$2.00 billion, was down 4 percent from \$2.08 billion in 1993. The value of purchased inputs increased 30 percent from the previous year to \$99.9 million and financial assets increased 2 percent to \$988.5 million. The value of machinery and motor vehicles increased 1 percent, from \$1.27 billion in 1993 to \$1.28 billion in 1994. The value of crops, at \$371.0 million at the end of 1994, was 24 percent below the value of \$491.3 million at the end of 1993.

Total farm debt was up 4 percent to \$3.06 billion with real estate and non-real estate debt increasing 1 percent and 7 percent, respectively. Real estate debt increased to \$1.54 billion from \$1.52 billion in 1993. Non-real estate debt increased from \$1.41 billion in 1993 to \$1.52 billion for 1994. Overall farm equity increased 4 percent to \$16.59 billion. The debt/equity ratio declined to 18.4 compared with 18.5 the previous year while the debt/assets ratio of 15.6 was unchanged from a year earlier.

Livestock and livestock products continued to be the leading contributor to Colorado's cash receipts with a total value of \$2.78 billion in 1994. This was down 7 percent from \$2.99 billion the previous year and represented 69.0 percent of the total cash receipts from all commodities, at \$4.03 billion. Receipts from cattle and calves totaled \$2.23 billion in 1994 which accounted for 80 percent of the total livestock receipts and 55.4 percent of the total cash receipts from all commodities. Receipts from crops totaled \$1.25 billion in 1994, up 4 percent from the previous year, representing 31.0 percent of the total. Wheat was the state's second leading contributor to cash receipts with \$297.8 million followed by corn with \$265.3 million. The value of milk sold wholesale and retailed directly by producers totaled \$214.2 million and remained the fourth leading contributor to cash receipts. Hay was fifth with \$169.6 million; potatoes ranked sixth with \$129.3 million; hogs were seventh with \$100.1 million; sheep and lambs were eighth with \$94.6 million; onions were ninth with \$63.9 million; and dry beans were tenth with \$57.0 million. Cash receipts from the top ten commodities accounted for 90 percent of the total cash receipts from all commodities in 1994.

^{1/} Totals may not add due to rounding.

Note: Reprinted from Economic Indicators of the Farm Sector, January 1995, USDA Economic Research Service. Cash receipt data reflect income derived from the sale of agricultural commodities during a calendar year for only that portion of the commodity that is sold.

^{*} Less than 0.05 percent.

PRICES RECEIVED BY FARMERS

Prices received by farmers and ranchers provide a basis for calculating the income from the Agricultural Sector as part of the National Income Accounts. These data are also extensively used to analyze past and current marketing patterns and to make current and future marketing decisions. Prices received for major farm commodities are used in computing the Index of Prices Received by Farmers, an important indicator of the economic environment of the nation's agricultural producers.

1995 LIVESTOCK REVIEW

SUMMARY - Colorado farmers and ranchers had 5 percent more cattle and calves on hand as of January 1, 1996 but 2 percent fewer sheep and lambs than they did one year earlier. The December 1, 1995 inventory of all hogs and pigs was 16 percent larger than a year earlier and the December 1, 1995 inventory of all chickens was up 4 percent. Colorado ranks 10th in the number of cattle and calves, 4th in the number of sheep and lambs, 18th in the number of all hogs and pigs, and 25th in the number of all chickens. The state also ranks as the 4th largest cattle feeder with marketings of more than two million head of fed cattle annually in each of the past 14 years. Colorado ranks 3rd in the number of market sheep and lambs and more than one million head of sheep and lambs have been slaughtered in the state in each of the last 16 years. This is the third year in a row that the annual hog slaughter has been above 50,000 head.

The state's dairy industry has been very stable for more than 20 years, with an annual average number of milk cows fluctuating between 70 and 83 thousand head. The number of bee colonies remained at 45 thousand colonies. Production dropped to 2.7 million pounds. The state's trout producers have sold about two million fish of various sizes each year since estimates were begun in 1989.

The total inventory value of the cattle, sheep, hogs, and chickens on hand at the beginning of the year (using the January 1 and December 1 reference dates) was \$1.71 billion, down 14 percent from the comparable value of \$2.00 billion one year earlier. Total inventories for hogs, cattle and chickens increased while those for sheep declined. The value per head decreased dramatically for cattle and decreased by a lesser amount for chickens but increased for sheep and hogs.

Pasture and range feed conditions were rated mostly fair to good at the beginning of the 1995 grazing season. During May, temperatures were generally normal and plentiful rainfall improved the June 1 condition rating to mostly good with 18% rated excellent. Near normal temperatures and above normal rainfall during June improved the condition rating to mostly good with 37% rated excellent by the beginning of July. In the second half of July above normal temperatures lowered the condition rating slightly by the first week in August. The southeastern portion of the state showed the most stress because of the lack of rainfall. The rating continued to decline slightly during August. Ratings were mostly good during September but again declined slightly during the month. The southeast was hurt the most in September because of the lack of precipitation. Statewide the condition rating remained stable in October with most of the pasture and range rated fair to mostly good at the end of the month and into mid-November.

CATTLE AND CALVES - The January 1, 1996 inventory of all cattle and calves increased 5 percent from a year earlier to 3.1 million head. The number of cattle and calves in feedlots being fed for the slaughter market increased 8 percent to 1.07 million head and accounted for 35 percent of the state's total inventory. During 1995, there were 290 feedlots in operation in Colorado. Those feedlots marketed 2.46 million head of fed cattle for slaughter compared with 2.37 million marketed from 290 lots in 1994. The 19 largest feedlots marketed 70 percent of the annual total in 1995. The number of beef cows, at 838,000 head increased by 21,000 head from the previous year while the number of milk cows decreased 1,000 head from 1995 to 82,000 head on hand at the beginning of 1996.

There were 900,000 heifers 500 pounds and over on hand at the beginning of 1996, up 6 percent from the 850,000 head on hand at the beginning of 1995. Of that total, 160,000 were being kept for beef cow replacement (up 3 percent from last year) and 45,000 head were being kept for milk cow replacement (unchanged from 1995). The remaining 695,000 were other heifers (up 7 percent from the previous year) of which 460,000 were being fed for the slaughter market in feedlots with a capacity of 1,000 head or larger. The January 1, 1996 inventory also included 980,000 head of steers weighing 500 pounds or more (up 7 percent from the previous vear) of which 580,000 were in feedlots with a capacity of 1,000 head or larger. Of the 1,070,000 head of cattle on feed, 1,050,000 head were in feedlots with a capacity of 1,000 head or larger. The number of bulls weighing 500 pounds or more was unchanged from the previous vear at 50,000 head. The number of calves (steers, heifers, and bulls weighing under 500 pounds) was up 9 percent from the previous year to 250,000 head. The 1995 calf crop in Colorado, at 860,000, was 1 percent larger than the 1994 crop of 850,000 head.

Milk production during 1995, at 1.55 billion pounds, was slightly less than last year's record high production. For the previous ten years the state had set record levels of milk production. The annual average number of milk cows on hand increased by 2,000 head to 83,000 thousand for 1995. Producers obtained an average production of 18,687 pounds per cow in 1995.

The total inventory value of all cattle and calves in Colorado as of January 1, 1996 was estimated at \$1.61 billion, 16 percent less than the \$1.92 billion inventory value for January 1, 1995. The average value of \$520 per head represented a decrease of \$130 per head from the previous year. The number of operations with cattle at any time during 1995 remained the same as the previous year at 13,000. The number of beef cow operations declined 500 from a year earlier to 10,000 and the number of milk cow operations declined 100 from 1994 to 1,000 for 1995.

SHEEP AND LAMBS - The January 1, 1996 inventory of all sheep and lambs in Colorado declined 2 percent from the previous year to a record low 535,000 head. The classification of "Sheep on Feed" was broadened in 1996 to "Market Sheep and Lambs." This change will show not only the sheep and lambs in feedlots but also the number of sheep and lambs intended for shipment to market but not currently on feed. The stock sheep category was changed to "Total Breeding Sheep and Lambs." Sheep inventory estimates prior to 1996 did not include new crop lambs. Beginning with the 1996 report, new crop lambs are included in the inventory.

The total breeding sheep and lamb inventory as of January 1, 1996 was down 2 percent to 245,000 and the number of market sheep and lambs declined 2 percent to 290,000 head. The number of ewes one year old and older, at 210,000, was unchanged from January 1, 1995 and the number of rams one year old and older, at 7,000 head, was also unchanged. The number of replacement lambs less than one year of age declined 15 percent from a year earlier to 28,000 head. The 1995 lamb crop of 240,000 head was down 6 percent from the 255,000 head born in 1994 and was 25 percent below the 320,000 head born in 1993.

On January 1, 1996, the 290,000 head of market sheep and lambs consisted of 2,000 sheep and 288,000 lambs. The 288,000 head of market lambs were estimated to be in the following weight groups: 3,000 head weighing less than 65 pounds, 40,000 head in the 65 through 84-pound category, 100,000 head in the 85 through 105 pound category, and 145,000 head weighing more than 105 pounds.

The January 1, 1996 inventory value of all sheep and lambs in Colorado was estimated at \$47.08 million, up 17 percent from a year earlier. The average value of \$88.00 per head was \$14.00 higher than the previous year. The increase in average value more than offset the reduction in total inventory to increase the overall inventory value. The number of operations in the state with sheep continued to decline and was at 1,300 for 1995 compared with 1,600 the previous year. In 1993 there were 1,800 operations with sheep and in 1992 there were 1,900 operations.

HOGS AND PIGS - The December 1, 1995 inventory of all hogs and pigs in Colorado was 580,000 head. This was an 16 percent increase over the December 1, 1994 level and the largest inventory number since 1944. Except for 1992 when the inventory was the same as the previous year, inventories have increased each year since 1987. The 80,000 head increase from last year is the largest year to year increase since 1991. The breeding hog inventory increased 9 percent from a year earlier to 120,000 head. The market hog inventory of 460,000 head increased 18 percent. The state's total pig crop for 1995, at 1,132,000, was down 1 percent from the 1994 pig crop of 1,148,000 head.

The December 1994 - May 1995 pig crop was nearly unchanged from the previous year and the June - November 1995 pig crop was down 3 percent. The number of sows farrowed increased 3 percent from the previous year in the first half of the period and decreased 1 percent from the previous year during the last half of the 1995 period. Producers averaged 8.2 pigs weaned per litter for the year.

The December 1, 1995 inventory value of all hogs and pigs was placed at \$45.82 million, 53 percent higher than a year earlier. The average value, at \$79.00 per head, increased \$19.00 per head from a year earlier. The number of operations with hogs during 1995 declined 200 from a year earlier to 1,400.

CHICKENS AND EGGS - The all chicken inventory in Colorado as of December 1, 1995 totaled 4.13 million birds, up 4 percent from the 3.98 million on hand one year earlier. The number of hens and pullets of laying age increased 5 percent to 3.11 million. Of that total, 1.48 million were hens (up 6 percent) and 1.64 million were laying pullets (up 5 percent). The total inventory also included 380,000 pullets 13 to 20 weeks of age, 465,000 pullets less than 13 weeks of age, and 166,000 other chickens. During the period from December 1, 1994 through November 30, 1995, the state's laying flocks produced 805 million eggs, up 3 percent from the 778 million eggs produced a year earlier.

The total inventory value of all chickens was \$7.84 million, down 6 percent from a year earlier as a 10 percent decrease in value per head more than offset the larger inventory. The average value per bird was \$1.90, down 20 cents from the December 1, 1994 average.

BEES AND HONEY - Honey production in Colorado during 1995 totaled 2.7 million pounds, down 21 percent from 1994. The number of colonies remained unchanged from the previous year at 45,000. The yield per colony decreased from 76 pounds in 1994 to 60 pounds in 1995. While honey estimates were not made from 1982 through 1985 this was the lowest yield per colony since 1980. The 1995 honey crop was valued at \$1.84 million compared with \$1.92 million for the 1994 crop. Producers received an average of 68 cents per pound for honey sold in 1995, up 12 cents from a year earlier. Producer stocks of honey on hand as of December 15, 1995 totaled 1.40 million pounds, 23 percent lower than a year earlier.

TROUT - There were 33 operations in Colorado during 1995 which had trout sales of \$2.27 million compared with 27 operations with sales of \$2.27 million in 1994. Producers marketed 1.05 million pounds of food size, stocker, and fingerling fish during 1995 and received an average price of \$2.17 per pound. That compares with 1.03 million pounds sold in 1994 at an average price of \$2.21 per pound.

ANNUAL REPORT

COLORADO DEPARTMENT OF AGRICULTURE

FISCAL YEAR 1995-1996

The Honorable Roy Romer, Governor
Thomas A. Kourlis, Commissioner

ANNUAL REPORT

OF THE

COLORADO DEPARTMENT OF AGRICULTURE

Fiscal Year 1995-1996

Roy Romer, Governor Thomas A. Kourlis, Commissioner Robert G. McLavey, Deputy Commissioner

Introduction

The Colorado Department of Agriculture was created as a department of state government in 1949, with historical roots dating back to before the turn of the century. Currently, the department employs about 250 individuals around the state performing a wide array of services to the crop and livestock industry and Colorado consumers.

Organization

The Colorado Agricultural Commission, a body of nine persons appointed by the Governor, serves to advise, counsel and direct the Commissioner of Agriculture, also appointed by the Governor. The commission is comprised of individuals of both political parties from agricultural districts and represents a cross section of the state's agricultural community.

The department is organized into five divisions, Animal Industry, Plant Industry, Stock Inspection, Markets, and Inspection and Consumer Services. These five divisions provide regulatory, inspection, and marketing assistance to Colorado's agricultural industry and provide valuable consumer protection services to the state's citizens.

Office of the Commissioner

Thomas A. Kourlis, Commissioner of Agriculture Robert G. McLavey, Deputy Commissioner

Ongoing activities in the Commissioner's Office include the programs of the Resource Analysis Section, Public Information, Personnel, Administrative Services, and the Agricultural Commission.

During the 1996 session of the Colorado General Assembly, a number of important bills were enacted affecting the department's programs. 1) Both the

Pesticide Applicators' Act and the Nursery Act were continued following sunset review; 2) a new noxious weed act was passed which creates a statewide weed coordinator in the Department of Agriculture and gives additional powers to counties; 3) legislation was passed, requested by livestock and sportsmen's organizations, clarifying the Commissioner of Agriculture's authority to control depredating animals.

The fifth annual Governor's Agricultural Outlook Forum was held on February 23, 1996 at the Colorado Convention Center in Denver. The theme of this year's forum was "New Frontiers in Colorado Agriculture: Capturing Opportunity and Harvesting Ms. Margaret Porfido, Governor Romer's Chief of Staff, represented the Governor and spoke on population growth issues. Other speakers included Robert Warrick of Nebraska, Chairman of the Sierra Club Agriculture Committee, Alan Barkema of the Kansas City Federal Reserve, and former North Dakota Governor George Sinner. The afternoon session presented an opportunity to attend any one of five smaller break-out sessions which discussed topics related the 1996 Farm Bill, the public's perception of agriculture, growth issues, and opportunities for adding value to agricultural products produced in Colorado. The Forum attracted approximately 400 people from agriculture, business and academia.

In conjunction with the Governor's Agricultural Outlook Forum, Commissioner Kourlis convened the second annual meeting of Ag Insights. Ag Insights consists of representatives of agricultural organizations and organizations closely affiliated with the agricultural industry. The purpose of the meetings are to improve the level of communication among organizations within the industry to achieve greater success in conveying the message of the importance of ranching and farming in Colorado. The primary topic of the 1996 meeting was to discuss

a questionnaire which will be used to determine the Colorado citizens' perception of agriculture. The information gathered will be used to help design a comprehensive public relations campaign aimed at achieving a better and stronger future for the farm and ranch industry.

Ongoing programs sponsored by Ag Insights include a Media and Public Relations Committee working on the publicity campaign, two meetings to coordinate the industry's agenda for the 1996 legislative session, and a summer meeting to complete work on the Ag Insights Mission Statement.

Colorado Agricultural Commission

The Colorado Agricultural Commission held seven meetings in fiscal year 1995-96. Mr. David Ford was reelected Commission Chairman, and Mr. Dale DeJacamo was again elected to serve as Vice Chairman.

Resource Analysis

This two-person section analyzes key issues and trends affecting Colorado agriculture and develops and manages special programs at the direction of the Commissioner.

During 1995-96, the section staffed the Governor's Agricultural Lands Task Force, a statewide group of 17 leaders in agriculture and related fields which developed 22 specific recommendations for action. Recommendations focused on voluntary, incentive-based approaches to maintaining productive land in agriculture and the economic viability of agriculture. More than 10,000 copies of the 12-page final report were distributed statewide.

The section also provides administrative support for the Colorado Central Filing System for liens on farm products--the only system nationwide operated by a private company. During 1995-96, section staff has assisted in the design and implementation of a comprehensive statewide computerized system for lien information.

Section staff also: helped identify and fund studies to assess the impact of the Summitville mine on agriculture in the San Luis Valley; developed and managed a contract with Colorado State University to document the contribution of agriculture to Colorado's economy; helped plan and implement the 1996 Governor's Agricultural Outlook Forum; and participated in conferences and meetings on agriculture and the environment.

Administrative Services Section

The Administrative Services Section continues to focus on customer service in our accounting, budgeting, purchasing, data processing, and business support services provided to our divisions and the public. Revision of purchasing and Department fiscal rules related to travel has been completed. These were two areas targeted for quality improvement in our survey of department employees conducted last year.

Administrative Services' ADP staff has completed the Inspection and Consumer Services Division local area network, which was a vital link in implementation of the Strategic Information Management Plan designed to create department-wide computer network in the Denver Metro area. Management Information Systems has developed a methodology and data structures to provide a standard licensing base program for the Department. Feed, fertilizer and pesticide tracking programming has been completed for sampling in the Standards Laboratory.

Facilities audits have been prioritized by the Administrative Services Section and will be a three year project. Completion of this study will facilitate the Department in management of controlled maintenance projects.

Division of Markets Jim Rubingh, Division Director

The Markets Division is responsible for developing new marketing opportunities for Colorado producers and processors as well as retaining existing markets for the full array of Colorado products. The division also develops promotional programs and materials, assists in expanding the state's food and agriculture processing industry, administers the Seal of Quality Program, and collects livestock and produce market news from around the state. The division provides staff assistance to the Colorado Agricultural Development Authority.

Marketing Orders Program

Marketing orders are producer-funded programs which collect funds from the point of first sale of certain farm commodities. The funds are used for crop research, market development, as well as for promotion, advertising, and education programs. These activities provide greater utilization of commodities and increased profitability for producers. In some cases, marketing orders provide for commodity inspection and grading in order to assure that only high-quality commodities reach the marketplace. Marketing orders generally work to solve marketing problems and conduct programs that would be impossible for individual producers to accomplish.

Colorado has marketing orders for seven commodities produced in the state covering apples, corn for grain, potatoes, dry edible beans, sweet corn, milk, and wheat.

The department's responsibilities involve enforcing, overseeing establishing, and the administration of the marketing orders. In addition, the program serves to enforce the marketing order rules and regulations by conducting investigations. holding hearings, and reviewing audits of the orders. The agency reviewed budgets for the eight marketing orders and approved expenditures totaling over \$3 million.

International Marketing

The goal in the international marketing program is to increase the export sales of Colorado grown and processed agricultural products. The section works with individual companies as well as in developing industry specific marketing efforts. The office also provides access to the USDA Foreign Agricultural Service programs. This section coordinates the agricultural access to the State of Colorado offices in Japan, Mexico and Great Britain.

Individual counseling ranges from market assessment utilizing research reports, computer data sources and other research, to assistance in obtaining branded trade promotion grants for overseas marketing and assistance with Colorado's Agricultural International Trade Promotion Program which provides financial assistance for international promotion.

A key element of the section's international trade development effort is coordinating state participation in WUSATA, the Western U.S. Agricultural Trade Association. Through WUSATA Colorado companies have access to international trade development funds and industry and market projects. CDA is currently managing two projects in Japan and one in Mexico. In Japan we have projects for private label foods and organic and natural foods. In Mexico Colorado has the lead on a program to develop a video on how to export agricultural products through Mexican customs. This video explains what documentation is necessary and how to avoid problem situations.

The international section continues to build the resource library for international trade which provides marketing data for most major markets. The section is also active in recruiting buying missions to Colorado to meet with Colorado companies. This includes processed foods as well as livestock missions. The project coordinated with JETRO (Japan External Trade Office) to bring a Senior Trade Advisor for processed foods to Colorado on a monthly basis continues. This program helps companies evaluate their product for the Japanese market as well as a chance to introduce their product to the Japanese market through a JETRO publication and direct introduction of their product to the largest food retailer in Japan.

Domestic Marketing

The mission of the domestic marketing program is to increase awareness and demand for Colorado food and agricultural products in local, regional and national markets.

The domestic marketing staff publishes and distributes five marketing directories for Colorado producers: the Hay Directory, the Farm Fresh Directory, the Fresh and Processed Food Trade Directory and the Livestock Export Directory. The Markets Division also offers a handbook, Developing a Marketing Plan for your Food Product and publishes a quarterly newsletter.

Ongoing marketing activities include a program bringing chefs together with Colorado producers; the Seal of Quality program, a labeling and inspection program that differentiates super-grade apples; the Centennial Farms program, which recognizes 100-

year-old farms in the state; a low-cost focus group program; the "Gimme 5 Colorado" produce campaign, a statewide effort to increase awareness of the importance of fruits and vegetables in the diet; and a public relations program, which informs the media and consumers when select Colorado crops come into season. We are also developing a Colorado Agricultural Speakers Bureau which will discuss agricultural issues with audiences around the state. A billboard promotional program is also being developed. We also have a program to promote Colorado wines which is funded by the Colorado Wine Industry Development Board.

The division continues to serve as the lead agency for aquaculture development in the state. As of May 1996, Colorado has 38 licensed aquaculture facilities.

Food Processing

To assist in increasing agricultural processing in the state, the Markets Division administers the Agricultural Processing Feasibility Grants Program and the Alternative Agricultural Research and Commercialization (AARC) Program. Feasibility Program assists local governments and entrepreneurs in evaluating the potential for developing or expanding agricultural processing facilities. The program is funded by the Colorado Economic Development Commission. Program, funded USDA. encourages bv commercialization of non-food, non-feed products from farm & forestry materials.

Assistance is also given to farmers wishing to diversify their operations through processing, to existing Colorado food companies interested in expansion, and to out-of-state food companies considering locating in Colorado.

Special projects have included: organization of regional workshops on starting a food processing business, and marketing your food product; recruitment of food processors at state attended trade shows; placement of a Colorado food supplement in a national food magazine; Colorado Co-Pack Directory, a listing of companies which provide contract packing services; From Growing to Processing - A Start-Up Guide for Food Processors; and Checklist for Start-Up Food Processors, a concise listing of steps in developing your business.

Market News

Personnel of the Colorado Department of Agriculture's Markets Division attend livestock sales at the major sale yards around the state to report the movement and price of livestock exchanged in open trading. This information is made available to livestock producers. The staff also monitors and reports hay, fresh produce and nursery marketings.

Brand Inspection Division J. G. Shoun, Brand Commissioner

The Brand Inspection Division has a long history in Colorado beginning around 1865 in what was then the Colorado Territory. Today, the division administers more than 35,000 livestock brands to identify ownership of cattle, sheep, mules, burros, horses, elk and fallow deer. Brand inspection is crucial to verify ownership in cases of strayed or stolen livestock, and animal health programs are strengthened by the ability to trace animals to their herd of origin.

The division is administered by the State Board of Stock Inspection comprised of five members, appointed by the Governor, representing all segments of the industry. The members of the board during the 1994-95 period were Mr. Dick Tanner of Yoder, Mr. Dean Davis of Lindon, Mr. Lee Spann of Gunnison, Ms. Linda Ingo of Ridgway, and Mr. Robert E. Bledsoe of Wray.

The division employs 65 brand inspectors located throughout the state, eight brand foremen, and nine administrative personnel, including Brand Commissioner J.G. Shoun. The annual budget for the division exceeds \$2.7 million and is completely funded by inspection fees levied to livestock owners and brand registration fees levied every five years. In 1995-96, division personnel traveled in excess of 1.3 million miles in the course of their duties and inspected over 4,700,000 head of livestock.

The division is assigned five principal regulatory responsibilities: to record and administer livestock brands; inspect livestock and verify ownership before sale, transportation beyond 75 miles, or slaughter; inspect and license packing plants, livestock sale rings, and inspect all consignments before sale to verify ownership; license and inspect alternative

livestock (elk and fallow deer) facilities; and prevent and return strayed or stolen livestock and investigate reports of lost or stolen livestock.

In addition, brand inspectors collect beef promotion and research funds. The division is also the trustee for all surety bonds issued to licensed markets and packing houses doing business in Colorado.

In 1995-96, the division inspected approximately 4.7 million head of livestock. In addition, they identified ownership of lost, stolen, or strayed and questionably owned livestock valued at \$17 million. The division conducted 60,000 horse inspections and issued twice as many permanent horse travel permits than previous years.

The Brand Division has concentrated on educational programs in the past few years. The focus of the educational program is on teaching brand law and theft prevention to the public and law enforcement agencies. Eighteen separate classes were given in 1995-96, all in different areas in Colorado.

Division of Plant Industry John Gerhardt, Director

The Colorado Department of Agriculture's Division of Plant Industry performs a wide array of services to the public and engages in several important environmental and public health protection programs.

Beginning as the Bureau of Plant and Insect Control in 1937, the agency was under the direction of the State Entomologist. The division is organized into the Biological Pest Control, Pesticides, and the Plant and Insect sections. The division's staff of 37 includes 12 field inspectors (10 of whom are cross-trained in multiple inspection and two are chemigation inspectors), and eight biological pest control specialists.

Biological Pest Control

In 1945, the Bureau of Plant and Insect Control developed the state's initial biological pest control program in Palisade, Colorado, at the Colorado Department of Agriculture Insectary.

Biological pest control affords the opportunity to decrease agriculture's reliance on chemical pest

control technology thereby decreasing production costs, reducing a portion of the chemicals entering the environment, and when colonies of beneficial insects are established, it offers a permanent pest control solution.

In 1995-96, the staff of the Biological Pest Control Section conducted 587 releases of 39 species of beneficial insects. This was an increase in activity of approximately 27% over FY 1994 (1994's activity level was an increase of 18% over the previous year). The releases were designed to assist in the control of fourteen weed species and six insect pests throughout the state.

Plant and Insect Section

This section provides the following services:

- Inspection of plants and plant products intended for export to provide certification required by receiving states and countries;
- Registration of sellers of nursery stock, providing inspection of that stock to aid in control of insects and diseases, and aiding consumers in purchasing high quality stock;
- Performs request inspections of apiaries for bee diseases;
- Conducts pest surveys and works with private and public agencies to control certain pests;
- Administration and enforcement of the Colorado Chemigation Act to avoid pollution of groundwater sources;
- Registers and inspects commercial seed dealers to assure truth in labeling of seed as to content and germination claims;
- Administers the organic production certification program to assure buyers of organically-grown produce that their produce conforms with state standards required before making such claims;
- Administers fruit and vegetable pesticide residue monitoring under contract with USDA;
- Administers request program for certification of weed free forage crops including hay and mulch crops.
- Implemented new program for registration of canola fields to avoid cross pollination of different types of rapeseed. Only the food

type, canola, may be grown in the San Luis Valley, the only area subject to the registration program at this time.

In 1995-96, the section issued an estimated 1,750 phytosanitary inspection certificates on plant products for international export valued at approximately \$10 million. Inspectors conducted 1,150 inspections of nurseries and greenhouses and the section issued approximately 1,600 registrations to sellers of nursery stock. An estimated 8,000 stop sales orders were issued onnursery stock in 1995-96.

The Plant and Insect Section's implementation of the chemigation program, which began in 1989, this year resulted in the issuance of 3,200 permits. Approximately 1,200 inspections of seed dealers were conducted, and an estimated 600 cease and desist orders were issued for violations of labeling. Approximately 1,000 seed sellers and custom seed conditioners were registered. The section issued 130 organic certification licenses.

The fruit and vegetable pesticide residue monitoring program is designed to identify any possible contaminants to the food system. A total of 388 samples were taken in 1995-96. Underthe weed free forage crop certification program a total of 243 field inspections were made on 5560 acres of forage and mulch crops, mostly hay, for 102 producers.

Pesticides Program

The Pesticides Section regulates pesticides, pest control devices, pesticide application, pesticide applicators and is the lead agency for the protection of groundwater quality from contamination by agricultural chemicals. Its services include: ensuring proper labeling, packaging, display, formulation, and effectiveness of pesticide products; handling special local needs pesticide registrations and emergency exemption requests for pesticides; ensuring competency of commercial pesticide applicators, and under certain circumstances, limited commercial and public applicators; and to ensure the protection of groundwater and the environment from impairment or degradation due to the improper use of agricultural chemicals while allowing for their proper and correct use.

In 1995-96, approximately 9,026 pesticide products were registered in Colorado; approximately 598

applicators were tested for competency; approximately 701 commercial pesticide application firms were licensed and 115 limited commercial and public applicators were registered; approximately 2,615 applicators were licensed as qualified supervisors or certified operators; approximately 44 complaints of misuse of pesticides or other violations of the Pesticide Applicators' and Pesticide Act were investigated; and administrative actions were finalized in approximately 15 complaints ranging from letters of warning to license suspensions, civil fines, and assurances of discontinuance.

To ensure groundwater quality, a coordinated effort is essential in dealing with this issue since numerous federal, state and local agencies are involved. The department ensures a coordinated approach by maintaining contact with the other agencies and attending meetings to keep abreast of what work is being performed.

Education and public outreach is the key to the groundwater program. Presentations to industry, professional organizations and interested groups are ongoing to both inform and seek advice. A citizens' advisory committee consisting of representatives from the general public, producers and agribusiness has been instrumental in providing user and public involvement into program development and implementation as well as helping to determine priorities.

Universal best management practices have been developed and are available. Committees in the San Luis Valley and the South Platte have modified the best management practices for nutrient and irrigation management to fit local conditions. These have bee published and are available. The San Luis Valley committee is currently working on modifying the pesticide best management practices for local A committee is working on the conditions. localization process in Delta County on the Western Slope. Interest in this localization process has been expressed throughout the state. Groundwater was monitored in the Arkansas River Basin from Pueblo to the state line and in Weld County between Brighton and Kersey. One hundred thirty (130) wells were sampled with numerous determinations being performed on each. Rules and regulations for bulk storage facilities and mixing and loading areas are being implemented.

Inspection and Consumer Services Division

Ronald Turner, Director

The Division of Inspection and Consumer Services consists of five sections. The division employs approximately 95 individuals in a variety of inspection programs designed to assure fairness in the marketplace and quality, safety, and financial soundness in other commercial transactions.

The Office of the Director governs the five sections of the division. Under the director, the Facility Operations Program oversees two state-owned buildings occupied by the division with one goal in mind, to make sure that the buildings maintain an environment of safety and security for the employees.

Technical Services / Field Programs

The Division's Technical Services/Field Programs Section is responsible for field inspections, testing and/or sampling for the following programs: Measurement Standards (small devices), Feed, Fertilizer, Egg, and Meat Inspection. Each inspector in the section has been trained to perform inspections in all five program areas. Twelve inspectors, strategically located throughout the state, perform the various inspections required for each program. Inspectors are empowered to enforce the laws and regulations relating to each program.

In addition to field inspections, the Technical Services Section is responsible for the administration of the feed, fertilizer, egg, and meat inspection statutes.

The Feed Program registers and selectively samples commercial animal feeds throughout the state. In 1995-96, 775 companies registered 11,100 products. These numbers reflect an increase of 21 companies and 254 products over last year. There were also 3,650 inspections conducted and approximately 3,950 samples taken, representing 61,050 tons of feed. This year the number of samples not meeting the labeled guarantees when analyzed by our laboratory, decreased from nine to six percent. Inspection (tonnage) fees were collected on 1,557,102 tons of feed. Under a cooperative agreement with the U.S. Food and Drug Administration, 18 medicated feed mills were also inspected.

The Egg Inspection Program assures compliance pertaining to quality and labeling standards for eggs at the retail and wholesale level. In the 1995-96 license year 2,405 retail licenses and 108 wholesale licenses were issued. At these licensed locations, 691,824 dozens of eggs were inspected, and of that amount, 56,200 dozens, or 8.0 percent, were rejected. The Department continues to work with the industry to improve the quality of eggs on the market. New rules, being implemented this year will greatly assist the Department and the industry in these efforts.

The Fertilizer Program registers and selectively samples fertilizers, soil conditioners, and related products to determine nutrient content and to assure labeling accuracy in accordance with state laws. In 1995-96 the department registered 329 companies and 2.653 products. Approximately 1,969 inspections were made and 1,250 samples. representing 57,163 tons of product were taken and Inspectors issued 31 stop sales on analyzed. deficient products. New legislation, the result of a joint effort of the Department's fertilizer board and the Office of Small Business Advocacy, passed this year. The amendment eliminated the licensing of 138 lawn fertilizer applicators and 14 fertilizer manipulators. Additionally the legislation will enable the fertilizer advisory board to make other desired changes to the program.

The Fertilizer Program also inspects anhydrous ammonia tanks and assists in safety training in the use of this potentially dangerous product. Inspectors examined 3,285 ammonia tanks and rejected 774 of them as unsafe.

The Meat Inspection Program licenses and inspects meat processors and food plan operations. In addition, the agency protects the public from unsanitary or fraudulent practices in meat processing and bulk meat sales. In 1995-96, this program issued licenses to 130 facilities in the state. Six cease and desist orders were issued to meat processors and food plan operators in the fiscal year. 212 facility inspections were made. Three businesses were fined for statute violations and were licensed under probation.

Farm Products

The Farm Products Section is responsible for the enforcement of statutes licensing and regulating those who buy and/or store agricultural products

produced in Colorado or owned by Colorado residents. The agency assures that dealers and state-licensed warehouses are bonded and adequately capitalized. The section licensed over 1,400 firms and holds surety bonds in excess of \$100,000,000.

The section investigates complaints by producers, owners and dealers against dealers operating in Colorado. Issues cease and desist orders and/or other regulatory sanctions in the event a firm appears to be financially unable to meet its commitments. In addition, the section conducts investigations of complaints regarding timely payment or non-payment for farm products purchased and seeks remedies for losses including bond demands, stipulated licensing and civil and criminal prosecution.

Laboratory Services

The Laboratory Services section analyzes animal feeds and fertilizer product samples obtained by multiple inspectors in the division, and the lab also analyzes pesticide samples for the Plant Industry Division.

The laboratory checks animal feeds and pet foods registered in the state to assure that feed products conform to the manufacturer's labels for both nutrients and that they are free of contamination. The lab conducts the analysis of pesticides to assure that they meet manufacturers' guarantees and claims for label consistency.

The lab, under contract with the U.S. Environmental Protection Agency, analyzes pesticide residue samples to aid in the investigation of possible misuse or misapplication.

The lab also analyzes a limited number egg samples for pesticide residues and examines a limited number of meat samples for bacterial contamination and to assure that they meet manufacturers' claims for label consistency.

The CDA Groundwater lab continued to grow this past year. The lab, in cooperation with the State Health Department, who picks up the groundwater samples, has started a 5-8 year monitoring program of water wells throughout the State to find out if there are any problems with pesticide contamination and nitrate contamination. This is the second year of the monitoring program.

The lab analyzed about 150 water samples from July 1995 through February 1996. These samples were analyzed by four different methods for a total of 30 different pesticides as well as for Nitrate. The lab staff is preparing for the summer season when sampling will resume.

In 1995-96, the section conducted 28,000 different analyses on 6,500 samples.

Measurement Standards

This program licenses all weighing and measuring devices in commercial use in Colorado and certifies individuals operating public scales. The State Metrology Laboratory maintains custody of Colorado's official mass length and volume standards, and the laboratory provides, calibration of mass, frequency, length, volume and moisture in grain for public and private agencies that require standards traceable to the National Institute of Standards and Technology.

The Metrology Laboratory calibrated 6,503 mass standards, performed 296 other tests, and certified 943 tuning forks. Tuning forks are used bylocal law enforcement agencies to calibrate radar speed detectors. Production is down in the metrology laboratory due to a new metrologist who completed her NIST training in early December and is not yet up to full speed.

This section inspects and tests packages for truth in labeling as required by the Measurement Standards Act, it also tests and inspects the accuracy of measuring devices used commercially. More than 24,000 small weighing devices were tested in 1995-96, and of those, 11 percent were inaccurate. Inspectors examined 44,053 packages and found 15.0 percent to be short measure.

The section's large scale testing units tested and inspected 5246 scales (a 5.2 percent increase), while rejecting 40.6 percent of them.

Fruit and Vegetable Inspection

The Fruit and Vegetable Inspection program is a cooperative effort by the U.S. Department of Agriculture and the Colorado Department of Agriculture to assure consumers of high quality Colorado produce. The program operates under federal standards, rules, and regulations to provide for official inspection, grading, and certification of

produce. The certification concerns quality, condition, size, and other pertinent factors of fresh fruits and vegetables grown in the state.

Inspections are performed on either a mandatory or non-mandatory basis. Mandatory produce inspection is required by statute to promote quality standards which depict certain Colorado produce as desirable products in the marketplace. Non-mandatory inspections are conducted on other commodities for shippers which wish to market an inspected product. Inspection certificates are issued by the state to certify grade and condition of the product at the time of inspection.

In 1995-96, the section inspected an estimated 18,400,000 hundredweight (cwt.) of potatoes and 67,700 bushels of peaches, resulting in the issuance of approximately 33,000 certificates of mandatory inspection for the commodities. Other fruits and vegetables inspected totaled 586,000 cwt. resulting in 1,000 certificates issued for non-mandatory commodities.

Division of Animal Industry Jerry J. Bohlender, DVM, Director

The Division of Animal Industry is responsible for animal health and control activities in the state. The division has 19 employees, with one additional employee to be added in July, 1996. The division works in close cooperation with the livestock industry and veterinary medical organizations, as well as other state and federal agencies, to protect the health, welfare, and marketability of Colorado livestock.

Veterinary Section

This section is responsible for monitoring and minimizing brucellosis and other contagious diseases which could threaten Colorado livestock. The staff concentrates on diseases that are a threat to public health, would significantly impact the more than \$3 billion livestock economy in Colorado, and which cannot be easily controlled by individual livestock owners. Disease surveillance programs at slaughter plants and at livestock concentration points are conducted in cooperation with the USDA. Control of diseases is achieved through required inspections, vaccination, supervised treatments, and other appropriate activities. The section also licenses and

inspects establishments engaged in processing, handling, or transporting inedible meat products for pet foods and rendering establishments to assure compliance with sanitary standards necessary for disease control and to assure that such products are clearly labeled.

Additionally, the Veterinary Section is responsible for monitoring and controlling disease in captive cervidae, i.e. alternative livestock.

Colorado attained Brucellosis Free State Status in January of 1995. This status was achieved by not having any brucellosis infected cattle herds in the state in a one year period. Free status is maintained by active surveillance at slaughter to assure the absence of brucellosis infected herds. Colorado's participation in the National Brucellosis Eradication Program is significant in light of the fact that the target date for eradication of the disease in the United States is December 31, 1999. Nationwide, only 44 premises remain under quarantine for brucellosis control.

Colorado also participates in the National Swine Pseudorabies Eradication program. Colorado attained Stage IV status in April of 1995. Stage IV status requires the absence of any pseudorabies and a level of surveillance has been achieved. If Colorado can maintain this stage for one year without detection of pseudorabies, the state will be awarded pseudorabies free status. Free status in both brucellosis and pseudorabies is of economic benefit to the producer because a lower level of testing is required and livestock in free states are more marketable to producers in other states and are more desirable for the international market.

The Veterinary Section was busy attempting to control vesicular stomatitis during the spring and summer months of 1995. Over 100 confirmed cases of the disease were located primarily in the southeastern portion of the state and in Mesa County. More than 80 percent of the confirmed vesicular stomatitis cases were in horses.

An "Emergency Disease Preparedness Program" has been developed in response to the increasing risk of a foreign animal disease being introduced into Colorado's livestock. This program includes protocols which will be followed in the event of an emergency disease being diagnosed in Colorado.

Further, accredited veterinary practitioners will be trained din foreign animal diseases, and recruitment of state brand inspectors to monitor disease in livestock they inspect. Other state agencies have also been recruited to help in the event of an emergency disease.

Bureau of Animal Protection

The Bureau of Animal Protection investigates complaints concerning animal cruelty or neglect. Division staff assist local animal control officials and law enforcement officials and law enforcement organizations in training and investigations of complaints. In 1995-96, approximately 345 complaints of animal neglect or abuse were investigated by department personnel.

State-Federal Brucellosis Laboratory

The State-Federal Brucellosis Laboratory provides support for livestock disease identification, control, and prevention programs. The lab facilitates interstate and international livestock shipments through laboratory confirmation of disease-free status. Lab staff also trains public livestock market veterinarians in test procedures and confirms testing of livestock at such markets.

In 1995-96, nearly 500,000 serological and other tests for livestock diseases were performed on submissions received from packing plants, private veterinarians, state and federal field personnel and others. These tests were performed for disease surveillance, interstate movement, and to qualify animals for export to other countries.

Rodent/Predator Control Section

In Colorado, 3 million acres of private lands are damaged to some degree by prairie dogs, gophers, and other rodents. The Animal Industry Division's Rodent/Predator Control Section provides training, services, and supplies to private citizens and local, state, and federal officials to control vertebrate pests. The section assists producers in controlling livestock predation losses through cooperative agreements with local producer associations, counties, and the United States Department of Agriculture.

In Colorado more than three million acres of private land are damaged by rodents each year. A pilot

prairie dog control program using community service labor was successful and will be expanded. Over 750 pesticide applicators were trained in FY 95-96, along with supplying and training a number of non-agriculture private and governmental landowners and managers. The methods listed above are used by the rodent/predator control section to meet the department goals of effective, environmentally safe, and economically feasible rodent control.

The Division is currently working on a number of levels to increase efficiency in predator control. With the sheep and lamb industry lone suffering 2.2 million dollars loss in 1994 to predators, the regulatory, contractual and inter-agency agreement changes to increase efficiency. This would improve the performance of not only our department, but the local livestock associations, counties, U.S. Department of Agriculture and the Division of Wildlife.

In FY 95-96 the rodent/ predator section increased by 15 percent over previous years its assistance to individuals through telephone and on-site assistance.

Pet Animal Care Facilities Section

The Pet Animal Care Facilities Act (PACFA) has been administered by the Division of Animal Industry since 1994. PACFA gives the Colorado Department of Agriculture (CDA) the responsibility to enforce the statute (CRS 35-80-101) and the accompanying rules and regulations. The statute, rules and regulations set minimum standards for physical facilities, sanitation, ventilation, lighting, heating, cooling, humidity, spacial and enclosure requirements; nutrition, humane care, medical treatment; methods of operation; record keeping concerning health care, euthanasia, and transactions involving pet animals. Also addressed is the qualifications for licensure, the issuance of licenses and grounds for disciplinary actions, and the license fees.

Since early 1995 any person who is operating a pet animal facility that engages in selling, transferring, adopting, breeding, boarding, training, grooming, sheltering or rescuing dogs, cats, birds, rabbits, ferrets, reptiles or fish may need to be licensed with the CDA. PACFA is funded by license fees.
